Key solution: Trippie Canvas turns saved reels into booked trips, at the moment they fit

TRIPPIE CANVAS A living Canvas inside MakeMyTrip where every saved reel becomes a trip that is priced, kept current, verified and booked the moment it fits.

Built on **Myra · live prices · verified reviews · myCash**

1 Capture

"Let me keep this somewhere I'll actually use it."

- Share a reel from Instagram
- Forward to Myra on MMT app
- Share a screenshot or even a YouTube link

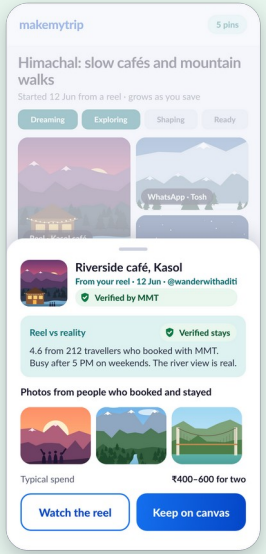

2 Living Canvas

"It already looks like a trip."

- See saves sorted into stacks
- Filter by vibe or view on a map
- Add notes and "why I saved it"

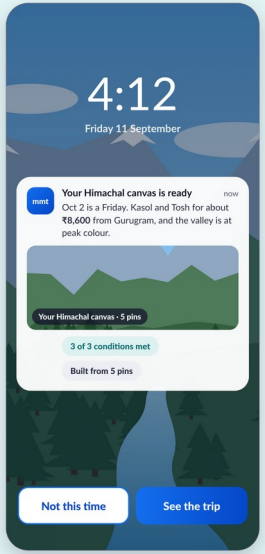

3 Verified reality

"Is it really like the reel?"

- Read reviews from real guests
- See real photos and crowds
- Ask Myra about any pin

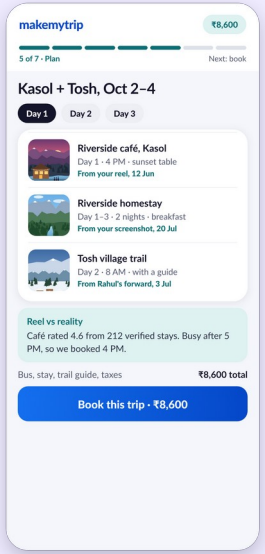

4 Nudge when it fits

"It found my long weekend before I did."

- Set budget, dates, weather
- See why it's not time yet
- Get max 2 alerts a month

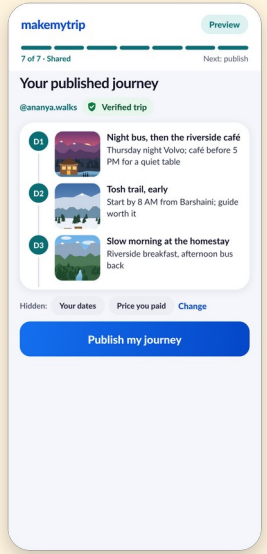

5 Plan + book

"I recognised every stop."

- Get a plan from her own pins
- See the full price up front
- Pay by UPI, pay later or EMI

6 Share the trip

"Someone else might love this too."

- Publish a verified trip
- Hide dates and price paid
- Earn myCash when others book

For Ananya: one Canvas instead of 5+ apps; alerts only when it fits; proof it's real

For MMT: intent before search; **₹164 Cr** incremental bookings by Year 5; profitable to run from Year 4

Why only MMT: only an OTA can remember, time, verify and book with live Indian prices

Screens are concepts from our prototype (Ananya's Himachal Canvas); prices illustrative. [10] MakeMyTrip Q1 FY27. [12] Expedia Trip Matching, May 2025.

What's the real issue? intent is born on Instagram and dies in a saved folder before MMT sees it

It isn't a lack of inspiration. Nothing holds a traveller's intent between the moment they save a reel and the moment they search.

1 INTENT STARTS OUTSIDE MMT

28% name Instagram their #1 travel inspiration [1]

59% start planning with no destination fixed [2]

So: Discovery happens in the feed, not in a search bar.

2 SAVES DIE QUIETLY

72% use 3+ apps to plan a single trip [9]

87% of Gen Z find booking overwhelming, so saves stay saves [3]

So: Saves are stored by post, not by trip, so they're rarely reopened.

3 FEASIBILITY ARRIVES TOO LATE

64% stall on dates or budget [9]

~50% let down when a trip didn't match its photos [6]

So: Timing, total cost and reality appear only after hours of research.

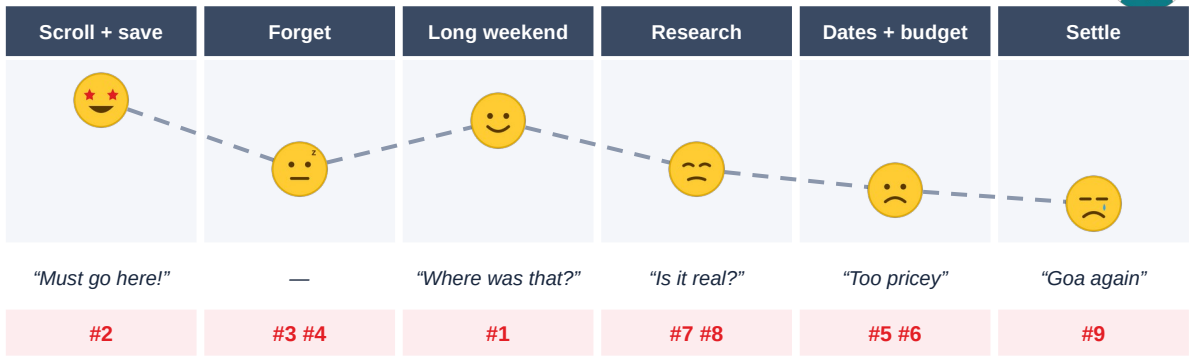

4 MMT ENTERS AT THE LAST CLICK

5.4% of gross bookings spent on marketing to win demand back [10]

1st OTA to capture reels is Expedia, in the US [12]

So: By the time a search reaches MMT, the trip was decided elsewhere.

ANANYA'S JOURNEY TODAY: WHERE THE TRIP DIES

WHY NOW

- **Global OTAs have started:** Expedia turns Instagram reels into bookable itineraries (US) [12]
- **Conversational booking is now standard:** Myra 2.0 handles 8M+ conversations a quarter; ixigo launched TARA [10]
- **Search engines are moving into intent:** Google AI Mode has begun booking hotels in chat, US first
- **The calendar is a trigger:** 14 long weekends in 2026 [13], each a moment to act on a save

So what: MMT doesn't need more inspiration. It needs to own the gap between the save and the search, before anyone else does.

Sources: [1] Agoda 2025; [2] Expedia Group; [3] Skyscanner 2026; [6] Full Frame 2025; [9] Survey n = 113; [10] MMT Q1 FY27; [12] Expedia 2025; [13] 2026 holidays. Pain points #1–#9: slide 4.

Problem statement + key assumptions: one question, a clear scope, six testable assumptions

We define who we solve for, what is in and out, and turn every belief the solution rests on into a test with a pass mark.

PROBLEM STATEMENT

How might MakeMyTrip **capture travel intent the moment a young traveller saves a reel**, keep it alive until the trip is feasible, and **turn it into an MMT booking?**

WHO WE SOLVE FOR

Ananya, 26 · Weekend Saver · Gurugram

"So many places saved, never know which one works this weekend."

Segment: metro, 22–30, 2–4 night domestic trips, solo or pairs

Needs: know fast if it fits · use long weekends · trust it's real

SCOPE: WHAT WE SOLVE NOW, NEXT AND NOT AT ALL

IN SCOPE NOW

- The gap between saving a reel and searching
- Metro travellers aged 22–30
- Domestic 2–4 night trips
- MMT app + WhatsApp entry

NEXT PHASES

- Group planning (Phase 3)
- Instagram saves import
- Creator booking rewards
- Tier-2 cities

OUT OF SCOPE

- International trips
- New supply or inventory
- Replacing Instagram as a feed

KEY ASSUMPTIONS, EACH WITH A PILOT TEST

#	We assume…	Evidence today	Pilot test (go / no-go)
A1	Users will share saves to MMT for an instant payoff	Saving is already the habit; Instagram is the #1 inspiration [1]	≥30% of pilot users share 3+ saves in 30 days
A2	Myra can find the place from a reel	Geotag, caption, comments, audio + one-tap confirm	≥90% correct; <15% need a confirm
A3	Rare, relevant nudges are welcome	87% of Gen Z find booking overwhelming [3]; max 2 alerts a month	Open rate ≥25%; mute rate <5%
A4	Canvas bookings are new, not shifted	Trips stall before any search (64% on dates or budget [9])	Holdout group shows ≥40% lift
A5	MMT's current stack covers the build	Myra: 8M+ conversations a quarter; pricing, reviews, checkout exist [10]	MVP live in ≤3 months on ₹7 Cr
A6	Rewards drive sharing without gaming	myCash only in Year 1, only on shared bookings	Fraud flags <1% of rewards

NINE PAIN POINTS WE SOLVE, IN ANANYA'S WORDS

- **#1 No idea that fits** — Free weekend, nothing matches her time, budget, city
- **#2 Lost at first sight** — Can't find a reel she scrolled past
- **#3 Saved but dormant** — Saves scattered, no context to act on
- **#4 Emotional decay** — The spark fades when she revisits it
- **#5 Timing mismatch** — The place doesn't fit her dates or season
- **#6 Affordability shock** — Total cost appears only after research
- **#7 Research fatigue** — Info spread across apps; endless cross-checking
- **#8 Reel vs reality** — Curated content; no proof of real conditions
- **#9 Satisficing** — Settles for the familiar; new feels risky

Sources: [1] Agoda 2025; [2] Expedia Group; [3] Skyscanner 2026; [9] Team survey, n = 113; [10] MakeMyTrip Q1 FY27. Pilot tests are targets we propose; each is a go / no-go on the roadmap (slide 5).

Root causes + opportunities: three root causes explain all nine pain points

Beneath the pain points sit three structural gaps. Closing all three needs place, price, timing and proof in one place: an OTA.

WHAT THE RESEARCH REVEALS

A loop, not a funnel
Postponed trips fall back into stale saves

The calendar is the real trigger
14 long weekends in 2026 [13] start trips, not reels

Effort rises as excitement falls
Trips die where the two lines cross

Social inspires, reviews decide
67% plan with reviews vs 55% with social [5]

ROOT CAUSES → PAIN POINTS

RC1
Evidence: strong

Reels carry emotion, not data

No place, price or timing travels with a saved reel, so every save needs research.

#2 Lost · #6 Cost · #7 Fatigue

RC2
Evidence: mixed

No memory or timing layer

Nothing brings a save back when it becomes feasible for her dates and budget.

#1 No idea · #3 Dormant · #4 Decay · #5 Timing

RC3
Evidence: strong

No trust layer

Nothing proves a reel matches reality, so she settles for the familiar.

#8 Reality · #9 Satisficing

OPPORTUNITY AREAS FOR MMT

O1	Intent memory: a home for every save	★ Now
O2	Trip-ready timing: act when it fits	★ Now
O3	Verified reality: proof from real stays	★ Now
O4	Group commitment: plans that survive the chat	◆ Phase 3
O5	Short-trip bundles at one price	Phase 3
O6	Booking-linked creator rewards	Phase 4

COMPETITOR SCAN: WHY ONLY MMT CAN OWN THIS

	Instagram	Expedia (US)	Airial / Mindtrip	Google	MMT + Trippie
Captures reels	✓	✓	✓	Partly	✓
Remembers saves over time	Partly	×	Partly	×	✓
Knows your dates + budget	×	×	Partly	Partly	✓
Live Indian prices (bus, homestays)	×	×	×	Partly	✓
Books as merchant of record	×	✓	×	×	✓

EVIDENCE BY PAIN POINT

#	Key evidence	Strength
1–4	59% start with no destination [2]; saves rarely revisited (small UX studies)	Strong · Weak
5–8	64% stall on dates or budget [9]; ~50% let down by photos [6]; 141 pages before booking [2]	Strong
9	70% return to a stay they know [7], yet 95% want trips to feel unique [4]	Strong

Sources: [2] Expedia Group; [4] Airbnb / YouGov 2026; [5] Amex 2025; [6] Full Frame 2025; [7] Booking.com; [9] Team survey, n = 113; [12] Expedia 2025; [13] 2026 holidays. Competitor scan is our assessment.

Ideas + implementation plan + timelines: Canvas first, then group planning, in four gated phases

SEVEN IDEAS, SCORED

Trippie Canvas + trip-ready nudges	O1 O2 O3	4.85	✓ Build now
Group planning (“Squad it” from a Canvas)	O4	3.60	◆ Phase 3
Verified reality layer	O3	3.40	Inside Canvas
“Where can I go?” search	O2	3.15	Fold into Myra
Creator booking rewards	O6	3.10	Phase 4
Short-trip bundles	O5	3.00	Phase 3
Reel-to-itinerary planner	O1	2.45	× Parity

WHY CANVAS FIRST, THEN GROUP

1. **Every group trip starts as one save.** Canvas builds the intent pool group planning draws on.
2. **Faster to prove.** MVP in 3 months on Myra; group needs split pay and refunds (6–12 months).
3. **Lower risk.** No money moves at MVP stage, so no fraud or refund exposure.
4. **Fixes the first leak.** Most trips die before any search; groups die later, in the chat.

Note: in Phase 3, “Squad it” turns any Canvas into a group plan.

HOW IT’S BUILT: ON MMT’S EXISTING STACK

Inputs — Share sheet, links, screenshots, WhatsApp

› **Decode agent** — Frames, caption, geotag, audio; cached per reel

› **Validate** — Timing · affordability · reality agents

› **Canvas + nudge engine** — Watches window, price, season; ≤2 alerts/month

› **MMT checkout** — Live inventory, UPI, pay later, myCash

Safeguards: confidence score + one-tap confirm · source and date on every claim · store the link and facts, never the video · consent for every connection (DPDP)

IMPLEMENTATION PLAN + TIMELINE

P1 · 0–3 MONTHS Capture + Canvas
₹7 Cr build, pod of 12; share-to-MMT, decoding, Canvas; top 20 destinations; 50k pilot users
GATE **Users share saves; places found right**

P2 · 3–6 MONTHS Watch + nudge
Budget, date and weather watches; alerts; Myra on WhatsApp
GATE **Nudges welcome; bookings are new**

P3 · 6–12 MONTHS Scale + group
Team grows to 16–18; Instagram import; all India; “Squad it”; bundles
GATE **Bookings hit the plan**

P4 · 12–18 MONTHS Community
Public Canvases, levels, myCash; creator booking rewards
GATE **Rewards not gamed (<1% fraud)**

Scores: team judgement, 1–5, weighted (impact 30%, root causes 20%, right to win 20%, speed 15%, defensibility 15%). Timelines are estimates. Each gate tests an assumption from slide 3.

Business impact + feasibility: a ₹7 Cr build on MMT's own stack, profitable to run from Year 4

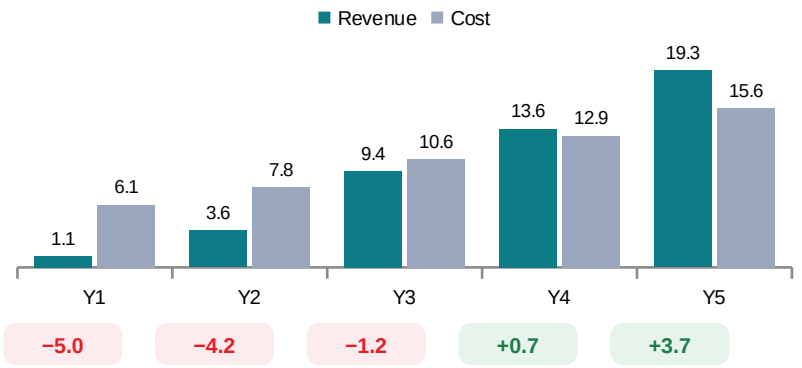

Three lenses, never mixed: annual operating profit, standalone NPV (cash proxy) and strategic value (retention; not cash).

Labels: FACT researched · ASSUMPTION planning assumption · VALIDATE prove in pilot

SIZING THE PRIZE (YEAR 5)

47.6M	MMT annual active transacting users (35M in Y1, +8%/yr)
13.8M	aged 22–30 (29%, planning proxy)
20.7 L	Canvas users (15% adoption)
3.21 L	Canvas bookings a year
₹409 Cr	gross bookings through Canvas
₹164 Cr	incremental (40%)

REVENUE, COST + SURPLUS (₹ CR) MODEL

THREE LENSES

Operating profit: Positive from Year 4; +₹3.7 Cr in Year 5
Annual revenue minus running cost

Standalone NPV (5 yr): −₹13.1 Cr
Pre-tax cash proxy; no terminal value. Hence staged funding

Strategic value: +₹28.2 Cr
Adds retention value (not cash); break-even lift 3.2 pp vs 10 pp target

VALUE PER RETAINED USER: ₹2,959

₹1,500	avoided reacquisition cost (OTA CAC range ₹800–2,500) [14]	ASSUMPTION
₹1,459	repeat contribution over 3 yrs: 1.3 extra bookings/yr × ₹893 contribution × 60% due to Canvas × 88% not already counted, discounted	ASSUMPTION
3.2 pp	retention lift needed to break even, vs 10 pp assumed	VALIDATE

Not counted: marketing avoided on cannibalised bookings, intent data for hotels, value after Year 5.

COST TO BUILD AND RUN

Year 0 build: ₹7 Cr (one product pod; no custom model training)

Small segments: cloud setup 0.3 · design 0.5 · tooling 0.5

Year 5 running cost: ₹15.6 Cr

Team (12 → 20 people)	₹7.0 Cr	ASSUMPTION
Variable fulfilment (30% of booking revenue)	₹4.9 Cr	ASSUMPTION
Cloud on existing stack	₹3.5 Cr	ASSUMPTION
AI decoding (~₹0.5 a reel)	₹0.1 Cr · <1%	FACT
myCash (Year 1 after MVP only, shared bookings)	₹0.16 Cr, Y1	ASSUMPTION

FEASIBILITY: BUILT ON WHAT MMT RUNS

Tech	High	Myra handles 8M+ conversations a quarter; decoding uses existing AI APIs
Data	High	Live prices, verified reviews, public holiday lists already exist
Legal	Med-high	Share sheet only, no Meta content API; DPDP consent; store link, not video
Ops	High	No new supply; alerts automated; checkout, UPI, myCash reused

Proof it works: Expedia already turns reels into bookings (US) [12]

Source: team financial model v3 (5 years + Year 0, 12.5% discount rate). [10] MMT Q1 FY27: revenue ≈10% of gross bookings; marketing 5.4% of gross bookings. [14] OTA CAC range ₹800–2,500 (CampaignHQ 2026). [15] Gemini API pricing 2026. [12] Expedia 2025.

Outcomes + risks: we fund it in stages and let measured retention decide

The case survives no acquisition-cost savings, no ads and a 17.5% discount rate. It breaks if adoption falls below ~55% of plan, so that becomes a funding gate.

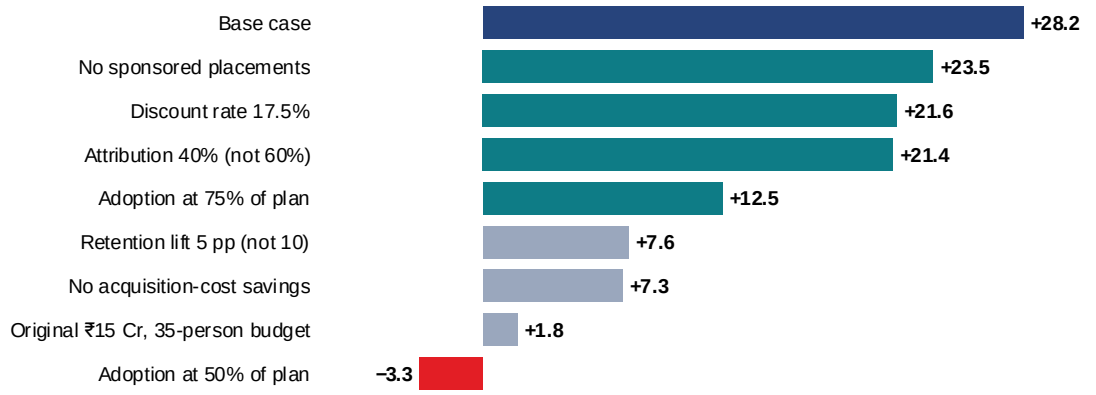

Labels: FACT researched · ASSUMPTION planning assumption · VALIDATE prove in pilot

KPI LADDER + TARGETS

Metric	Year 1	Year 3	Year 5	Label
Active Canvas users	1.75 L	11.0 L	20.7 L	ASSUMPTION
Alert → booking conversion	1.5%	3.0%	3.5%	ASSUMPTION
Canvas bookings a year	16.6k	154k	321k	ASSUMPTION
Incremental gross bookings	₹8.5 Cr	₹79 Cr	₹164 Cr	VALIDATE
Operating profit	−₹5.0 Cr	−₹1.2 Cr	+₹3.7 Cr	ASSUMPTION
North star: bookings that start from a Canvas	16.6k	154k	321k	—

Guardrails: mute <5% · place accuracy ≥90% · incrementality ≥40% · retention lift ≥3.2 pp · cancellations ≤ baseline

STRESS TEST: STRATEGIC VALUE (₹ CR)

STAGED FUNDING: A GATE BEFORE EVERY RUPEE SCALES

GATE 1 0–3 months · ~₹3 Cr

PASS IF

Share rate ≥30% of pilot users; place accuracy ≥90%

THEN

Release the rest of the ₹7 Cr build

GATE 2 3–6 months · holdout

PASS IF

Incrementality ≥40%; retention lift ≥3.2 pp; mute <5%

THEN

Scale beyond pilot cities

GATE 3 12 months

PASS IF

Adoption ≥60% of plan; conversion holds after myCash ends

THEN

National rollout

Maximum loss if the pilot fails: about ₹3 Cr, not the full ₹7 Cr build.

RISK REGISTER

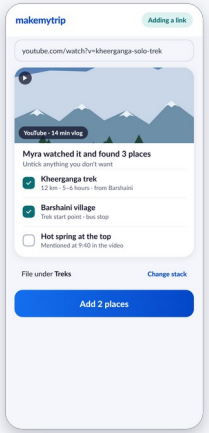

Risk	L / I	Mitigation	Early signal
Adoption below plan	M / H	Instagram import, WhatsApp entry, creator links	Share rate; Gate 3
Retention lift smaller than assumed	M / H	Holdout test before scaling; break-even is only 3.2 pp	90-day retention vs holdout
Conversion drops when myCash ends	M / M	Rewards only on shared bookings; test withdrawal in pilot	Conversion, month 13 vs 12
Cannibalisation above 60%	M / H	Count only Canvas-first bookings; holdout group	Incrementality
Placement demand or CPM	M / L	Case holds with no placements (+₹23.5 Cr)	Advertiser fill rate
Privacy or content rights	L / H	Consent per connection; sources shown; link, not video (DPDP)	Opt-outs, complaints

Source: team financial model v3; each stress test changes one input from the base case. Strategic values are estimates, not cash. Targets are planning assumptions to be proven in the pilot.

Extra analysis, data, visuals: the depth behind the Canvas, and the evidence behind the problem

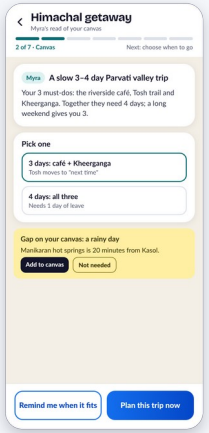

DEPTH BEHIND THE CANVAS: WHAT MAKES IT MORE THAN A SAVED FOLDER

Links become places

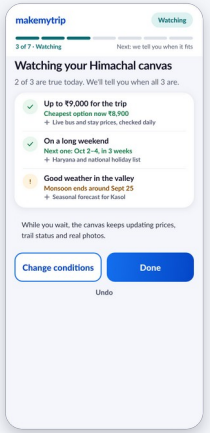

Myra extracts metadata, embedded links, and video from a 14-minute vlog and pulls out 3 places to file

Myra reads the Canvas back

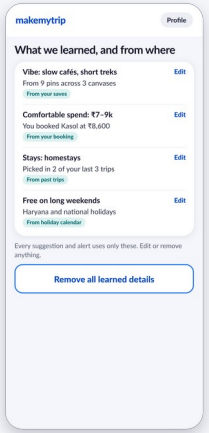

"3 must-dos need 4 days; you have 3." Pick an option, fill a gap

Every nudge shows its source

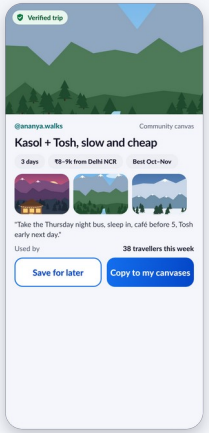

Budget from past trips, dates from holiday lists, weather from forecasts

She controls what MMT learns

Every learned detail shows its source; edit or delete any of it (DPDP)

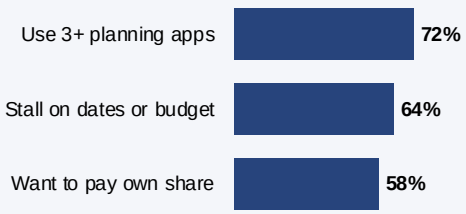

Trips live on as community Canvases

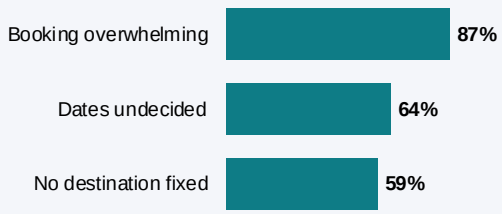

Verified trips others can copy, which feeds the next saves
